REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
2. Regarding Claim 1, Price discloses an access arrangement for an ADSL line (i.e., a circuit arrangement for forming the termination of an analog subscriber line) (column 1, lines 9-14) that has a ring connection and a tip connection (i.e., a first connection and a second connection for the subscriber line) (Fig. 4, reference 406, 404; column 9, lines 59-60) that are connected together by a series circuit comprising a first capacitor (Fig. 4, reference C12), a transistor (i.e., variable resistor) (Fig. 4, reference Q5) and a second capacitor (Fig. 4, reference C13) with a DC source (Fig. 4, reference IsoV+) connected to a node point between C12 and Q5 (i.e., the first capacitor and the variable resistor). Price further discloses an amplifier (Fig. 4, reference U2A) that corresponds to the DC operating point setting circuit claimed, is connected to the transistor that corresponds to the variable resistor claimed and adjusts the transistor that corresponds to the variable resistor claimed based on DC coupling between its inverting input and node txemit that corresponds to the second node claimed and is located between C13 (i.e., the second capacitor) and Q5 (i.e., the variable resistor). However, there is no controlling input to the amplifier that corresponds to the DC operating point setting circuit claimed from a node between C12 (i.e., the first capacitor) and Q5 (i.e., the variable resistor). As such, Price fails to disclose a DC operating point setting circuit connected to the variable resistor and configured to adjust the variable resistor based on DC voltage values measured at the first node. Because the prior art neither anticipates nor makes obvious the claimed invention, Claim 1 is allowable.
3. Claims 2 through 6 are allowable due to dependence from Claim 1.
